CONSENT FOR ROOT FORM DENTAL IMPLANTS

Diagnosis: After a careful oral examination and study of my dental condition Dr. Pawlus has advised me that my missing tooth or teeth may be replaced with artificial teeth supported by an implant.

Recommended Treatment: In order to treat my condition, Dr. Pawlus has recommended the use of root form dental implants. I understand the procedure for root form implants involves placing implants into the jawbone. This procedure has a surgical phase followed by a prosthetic phase.

Surgical Phase of Procedure: I understand that sedation may be utilized and that a local anesthetic will be administered to me as part of the treatment, my gum tissue will be opened to expose the bone. Implants will be placed by tapping or threading them into holes that have been drilled into my jawbone. The implants will have to be snugly fitted and held tightly into place during the healing phase.

The gum and soft tissue will be stitched closed over or around the implants. Healing will be allowed to proceed for a period of three to six months. I understand that removable partial or complete dentures usually cannot be worn during the first one to seven days of the healing phase.

I further understand that if clinical conditions turn out to be unfavorable for the use of this implant system or prevent the placement of implants, Dr. Pawlus will make a professional judgment on the management of the situation. The procedure also may involve supplemental bone grafts or other types of grafts to build up the ridge of my jaw and thereby to assist in placement, closure, and security of my implants.

For implants requiring a second surgical procedure, the overlying tissues will be opened at the appropriate time, and the stability of the implant will be verified. If the implant appears satisfactory, an attachment will be connected to the implant. Plans and procedures to create an implant prosthetic appliance can then begin.

Prosthetic Phase of Procedure: I understand that at this point I will be referred back to my dentist. This phase is just as important as the surgical phase for the long term success of the oral reconstruction. During this phase, an implant prosthetic device will be attached to the implant.

Expected Benefits: The purpose of dental implants is to allow me to have more functional artificial teeth. The implants provide support, anchorage and retention for these teeth.

Principal Risks and Complications: I understand that some patients do not respond successfully to dental implants, and in such cases, the implant may be lost. Implant surgery may not be successful in providing artificial teeth. Because each patient's condition is unique, long-term success may not occur. Patients who smoke decrease the success rate of dental implants.

I understand that complications may result from the implant surgery, drugs, and anesthetics. These complications include but are not limited to: post surgical infection, bleeding, swelling and pain, facial discoloration, transient but on occasion permanent numbness of the lip, tongue, teeth, chin or gum, jaw joint injuries or associated muscle spasm, transient but on occasion permanent increased tooth looseness, tooth sensitivity to hot/cold, sweet or acidic foods, shrinkage of the gum upon healing resulting in elongation of some teeth and greater spaces between some teeth, cracking or bruising of the corners of the mouth, restricted ability to open the mouth for several days or weeks, impact on speech, allergic reactions, injury to teeth, bone fractures, nasal sinus penetrations, delayed healing and accidental swallowing of foreign matter. The exact duration of any complications cannot be determined, and they may be irreversible.

I understand that the design and structure of the prosthetic appliance can be a substantial factor in the success or failure of the implant. I further understand that alterations made on the artificial appliance or the implant can lead to the loss of the appliance or the implant. This loss would be the sole responsibility of the person making such alterations. I am advised that the connection between the implant and the tissue may fail and that it may become necessary to remove the implant. This can happen in the preliminary phase, during the initial integration of the implant to the bone, or at anytime thereafter.

Alternative to Suggested Treatment: Alternative treatments for missing teeth include no treatment, new removable appliances and other procedures—depending on the circumstances. However, continued wear of ill-fitting and loose, removable appliances can result in further damage to the bone and soft tissue of my mouth.

Necessary Follow-up Care and Self-Care: I understand that it is important for me to continue to see my dentist. Implants, natural teeth and appliances have to be maintained daily in a clean, hygienic manner. Implants and appliances must also be examined periodically and may need to be adjusted. I understand that it is important for me to abide by the specific prescriptions and instructions given by Dr. Pawlus.

No Warranty or Guarantee: I hereby acknowledge that no guarantee, warranty or assurance has been given to me that the proposed treatment will be successful. Due to individual patient differences, a periodontist cannot predict certainty of success therefore no refund is available for the failed implants. Dr. Pawlus will try to place a failed implant a second time at no charge. There exists the risk of failure, relapse, additional treatment or worsening of my present condition, including the possible loss of certain teeth, despite the best of care.

Publication of Record: I authorize photos, slides, x-rays or any other viewing of my care and treatment during or after it's completion to be used for the advancement of dentistry and for reimbursement purposes. My identity will not be revealed to the general public, however, without my permission.

PATIENT CONSENT

I have been fully informed of the nature of root form implant surgery, the procedure to be utilized, the risks and benefits of the surgery, the alternative treatments available, and the necessity for follow-up and self-care. I have had an opportunity to ask any questions and I may have in connection with the treatment and to discuss my concerns with Dr. Pawlus. After thorough deliberation, I hereby consent to the performance of dental implant surgery as presented to me during consultation and in the treatment plan presentation.

I also consent to use of an alternative implant system or method, if clinical conditions are found to be unfavorable for the use of the implant system that has been described to me. If clinical conditions prevent the placement of the implants, I defer to Dr. Pawlus' judgment on the surgical management of that situation. I also give my permission to receive supplemental bone grafts or other types of grafts to build up the ridge of my jaw and thereby to assist in placement, closure and security of my implants.

I CERTIFY THAT I HAVE READ AND FULLY UNDERSTAND THIS DOCUMENT AND THE PRECEDING 2 PAGES (CONSENT FOR ROOT FORM DENTAL IMPLANTS).
